

UNIVERSE | Are we alone in the universe?

Question:

There are researchers on Earth who have dedicated their life to the most exciting question our existence offers us: Are we alone in the universe? What can you tell these researchers?

TAI SHIIN:

...

- *Those that **really try** to find an answer will have this question answered!*

The existence of other beings is basically defined through the fact that you cannot find an *ultimate* answer in regards to the building of the pyramids, the evolutionary history of the Incas and all the things you received as pieces of information that make you cogitate and deal with this.

From the protocol [[Universe and extraterrestrial life](#)] - page 8

The unimaginable construction of the universe can only be justified if it is *acknowledged* and *appreciated* by intelligences.

The size of the universe demands that more than one human race must recognise it for what it is; the billion fold surplus within UNIVERSAL CREATION would otherwise be *superfluous*.

From the protocol [[No utopia](#)] - page 26

This planet is **not the only** planet to support human life. ...

- *Human life existed on other planets long before human life appeared on this planet, because with a few exceptions, physical matter is the same everywhere. Planets are indeed of various density and organic life is therefore also of various density.*

From the protocol [[From star to star](#)] - page 25

... It simply is bigotry to believe that you on Earth here are the centre of the universe. Many planets exist and they are populated by souls that occupy a different position within the divine PLAN.

From the protocol [[SANTINER-Contact 2001 - Part 1](#)] - page 3

... Space experts and associated scientist no longer deny the possibility that *other* planets could also be inhabited. They are inhabited, at least a small portion of them is. The universe is however incredibly expansive and this is why there exist *numerous* human races, even though most of them

are incredibly far away from Terra.

From the protocol [[Messengers of the future](#)] - page 30

Question:

American astronomers have discovered a planetary system in the Star Sign of Cancer that is about 41 light-years away that could very likely resemble our own solar system. What can you tell us about this?

LUKAS:

Many planetary systems have already been discovered even though this has been tried *ad absurdum* in the past. But in the meantime, your sciences are now reached a point where they can discover these worlds with the help of more sophisticated instruments. There was originally a different intent on the agenda, namely to verify that terrestrial human beings are an absolutely special life form, one that exists nowhere else but on Earth. The dogma about this uniqueness *of Earth* has bitten the dust in the meantime and the dogma in regards to the uniqueness *of terrestrial life* will soon follow suit.

From the protocol [[Universe and extraterrestrial life](#)] - page 78

... Most areas of the universe exhibit a *many-tiered* array of life.

- *At least one third of space is inhabited by a **variety** of human beings and some of them are more than 12,000 years ahead of mankind on Earth in regards to their development.*

Millions of solar systems make up the divine universe. Man has no concept of the enormous variety of life that forms part of it! But all of this would be meaningless, if man with his soul, were not an observer of this universe through his perceptions, that is to say, through his feelings and his thoughts. However, as he is able to *contemplate* it, this enormous CREATION turns into *something meaningful* after all. It was created and configured to benefit man. The whole universe is at the disposal of every human being!

From the protocol [[Science, technology and the arts](#)] - page 43

Life exists on other planets that has adapted to prevalent condition and organs have accordingly adjusted and developed. You may therefore *not take your own organs* as a homogenous yardstick for the whole universe. You may not assume that human life and other organic life cannot exist on other planets, because biological conditions *are not completely equivalent to yours* here.

From the protocol [[A call from the cosmos](#)] - page 38

There are *invisible planets* throughout the universe that exhibit a level of development that no human being on Earth can begin to imagine. The divine existence doesn't just encompass the things that are humanly perceptible. ...

- *There are however **many more kinds** of physical matter you are presently unable to perceive. There therefore exist enormous worlds where animated life exists that cannot be captured by*

any telescope.

You are absolutely unaware of the gigantic fullness of glorious marvels and secrets the universe has to show. ...

From the protocol [[No utopia](#)] - page 4

Question:

What are individual solar system's functions within the universe?

LUKAS:

Functions in the form that they offer the residing life forms, if any exist at all, a home and an educational opportunity. Not all planets are inhabited by a long shot. But such an enormous number is left that, if you would recognise this, you would be astonished about the dimensions life in other existent worlds, in other existent universes has taken on. A number you're not familiar with.

From the protocol [[Universe and extraterrestrial life](#)] - page 79

Question:

... Are there many planets inhabited by people and are these people in contact with neighbouring planets?

ELIAS:

Consider how vast the universe really is. These inhabited star systems are often very far away from one another. In spite of that many are in contact with each other, because their technology is more advanced and capable to bridge these distances. Quite often one race of people learns from another one and it happens that even a super-race learns something from an underdeveloped humanity, because it is like an unfinished mosaic of great importance. ... The community on Earth could also profit enormously if they weren't so malicious and if they didn't regard their neighbours from other star systems as their *enemies*. ...

Creation *is a long way from being completed* and this is why communication between inhabited stars is very important. Can you imagine the advantages Earth has enjoyed in the past because of extra-terrestrials? Just think of the pyramids and the buildings of the original Mexicans.

You have trampled the LAWS of magic under your feet and you have ridiculed them. But the laws of death and brutality are well known to you, this is why they are continuously practiced. All sentient beings throughout the universe *ought to help to complete creation together*, even if they enjoy various levels of development. Even mankind on planet Earth has been designed and prepared to be the hand of GOD. This is something you should finally begin to understand!
