

## UNIVERSE | Do UFO's reach us?

(From the preface by **H. V. Speer** – leader of the Medialen Friedenskreis, Berlin)

... There are a lot of UFO sightings, more than 20,000 *authenticated* cases and ten times that number of unauthenticated sightings. Most people however cannot grasp *why* these brothers from the stars, in control of these spaceships, don't simply alight from their flying objects to cordially greet us and to talk to us face to face. But as such *direct* contacts are very, very rare; every MESSAGE from the STARS is perforce doubted and regarded a case of profiteering or pomposity. It is very difficult to overcome this misjudgement, mistrust and snubbing attitude.

From the protocol [[Mankind's greatest hour „X“](#)] – page 2 - 3

### Question:

Some people on this planet are convinced that Earth receives visitors from unidentified flying objects. But most people consider this to be an absurd assumption by fringe groups, whose members are more or less mazy in their heads. They find support for this point of view in governments, which attest that UFOS don't exist and that this can be verified through allegedly top secret means. But UFO researchers point out that no government needs to keep classified material about something that doesn't exist. Isn't it therefore not equally absurd that the authorities deny access to these files based on the reasons that the national security could be compromised?

### TAI SHIIN:

... These are contradictions that a *logically thinking* individual on your side must find immediately and strikingly obvious. Basically speaking, everyone knows that **more** things exists and **more** existences are present than what exists here on Earth. ANGELS are also CREATURES who come **from outside**. The Church *accepts* these ANGELS. ...

From the protocol [[SANTINER-Contact 2000](#)] - page 8

### Question:

To the question of whether extraterrestrials could actually reach the Earth, a prominent German astronaut gave the following answer: "If one allows facts to speak for themselves, it is relatively likely that there is life out there. There are around 100 to 200 billion suns alone in our Milky Way and there are billions of galaxies like the Milky Way. *We now know that there are planets within these solar systems.* We should therefore not have the arrogance to believe that we are the only ones. But I don't believe for a moment that extraterrestrials will ever come to Earth. The distances involved are just too great." What do you say to this argumentation?

### TAI SHIIN:

... There have been enough encounters and contacts with extraterrestrials - as you call it - in the past to make you realise that you are *not alone* in GOD'S almightiness.

From the protocol [[SANTINER-Contact 2001 - Part 1](#)] - page 3

The people on Earth cannot imagine that interstellar travel could be feasible. Your sciences regard it impossible. According to their opinion, such a journey would take *many years* to accomplish and where would the energy and the provisions for such a trip come from? - ...

In addition to this comes the scientific opinion that the planets of your solar system *cannot* support human life. Even the latest measurements of conditions on Venus confirm this point of view. Psychology therefore enters the picture by asserting that these "alleged" extraterrestrial spaceships would have *to be a phenomenon of human fantasy*, ergo the result of *mass hallucination*. This view is advocated by eminent personalities.

All of this sounds fine; it may even seem plausible ...

The reality is however completely different!

Your sciences *are not familiar with the possibilities* of such journeys. ...

From the protocol [ [Via Terra](#) ] - page 33

You believe that you have found the ultimate measure in regards to speed, the speed of light. This however is a *terrestrial concept*, because you have not yet gone beyond terrestrial perceptions.

From the protocol [ [Too hot to handle \(a hot potato\)](#) ] - page 45

Mankind on Earth is of the opinion that the word "impossible" applies to a lot of things. - We hold a different opinion, because the things we regard utopia today, may be possible tomorrow. There are therefore practically no utopias. If one had told people 4,000 years ago about all the things you have today, one would have regarded all of this without exception as impossible. *Utopias have become reality*. Today's generation's fantasies are certainly realisable. ...

- *There is no utopia. Everything is possible, if one knows the way to realise it.*

From the protocol [ [No utopia](#) ] - page 17

I will take the opportunity here to mention that the theory of relativity *is not correct in every respect*. The law of perspective was not taken into consideration. But we do have high regards for researcher Professor Dr. Werner Heisenberg, his well-thought-out formula appeals to us.

$$Y \cup \frac{d}{dx} \cup \Psi + l^2 \gamma^5 \Psi (\Psi + \gamma^{11} \gamma^5 \Psi) = 0$$

The universal formula is: **The impossible doesn't exist!**

From the protocol [ [A call from the cosmos](#) ] - page 37 - 38

The Earth has been under constant divine CONTROL for more than 4,000 years. This CONTROL is carried out by the SANTINER. The SANTINER have *remotely controlled scouting and information gathering craft at their disposal. These are equipped with instruments that can even register the prevailing thought processes of mankind's leaders. ...*

**These remotely controlled objects** are unmanned. If they are pursued, they automatically switch to escape mode. You know from experience that you can never catch up with them. The acceleration is so great that no human being – or none of us – could endure it. Their automatic infallibly finds the mother-ship.

**Manned ships** possess a lesser acceleration potential. But on longer journeys, that is to say, through space, they also reach speeds that a physical body could not survive. This is the reason why *dematerialisation* comes into effect. The whole journey then proceeds at a tempo that is way beyond the *speed of light*. This activity must also seem fabulous to you, because you are still far away from such potentialities.

How can one explain things to the uninformed when everything seems like magic? – Your scientists for instance, do not believe that anything can travel *beyond* the speed of light. Our experience tells us that completely different speeds exist, for instance in the field of thought transference.

- *A thought can bridge a distance that encompasses your whole solar system within a second, that is to say, it can be received immediately at any point along its periphery and this without loss of signal strength.*

Spaceships continuously communicate along these lines. – This is also possible in a *dematerialised* state, because the spirit does not sink into unconsciousness. – We are certainly dealing with masterpieces here. ...

From the protocol [ [Messengers of the future](#) ] – page 29

---

Question:

We cannot imagine the actual speed the SANTINER travel in their spaceships. Approximately how much faster than light do they travel?

Answer:

This speed is *a number of times* faster than that of light in a *dematerialised* state. This is so because we are no longer dealing with pure physical matter.

From the protocol [ [Not from this Earth - Part 4](#) ] – page 32

---

Question:

How is it possible for these flying saucers to race through space in such a short time?

ARGUN:

Flying saucers utilise cosmic rays, but especially sun and light energies. They travel *faster* than light! But when a flying saucer enters the Earth's atmosphere and encounters the resistance of the air, its enormous speed is certainly curtailed.

Question:

What kind of light energies are we talking about?

ARGUN:

Light consists of all sorts of bundled rays, visible and invisible ones. The SANTINER select some of these rays and utilise then with the help of complicated paraphernalia. These special rays make it possible for them to travel through space faster than the speed of light.

From the protocol [\[The SANTINER\]](#) - page 52

---

Question:

Did the American astronauts see UFOS on their trip to the Moon?

A. S.:

Yes, they did encounter a number of extraterrestrial spaceships. But because of the enormous speed these UFOS were travelling, they could not establish what type of flying objects they were dealing with.

Question:

Luminous UFOS were thought to be “burned out rocket stages”. What do you say?

A. S.:

This is impossible, because burned out rocket stages would not flicker as a *green* light. One keeps the TRUTH hidden from the masses, because one fears losing one’s position. ...

From the protocol [\[Armageddon\]](#) - page 24

---

(From a report by H. V. Speer - **leader of the MFK Berlin**)

- *The TRUTH awaits its discovery and its publication!*

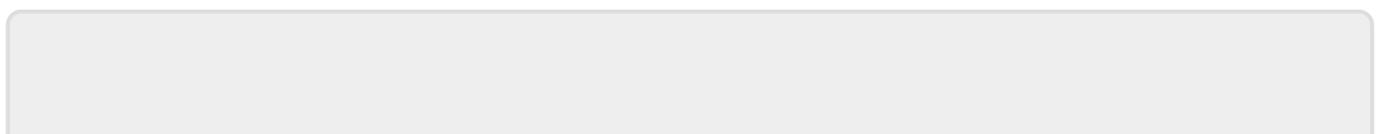

Man does not just live on *one* planet, but within an infinite universe that accommodates planet Earth. Man’s existence is therefore not limited to planet Earth, but represents an intelligent part of the universe.

People who come to us in “flying saucers” bring us knowledge about life in other solar systems. Flying saucers is such a horrible term for the most bodacious flying objects man could ever encounter. There is something about these flying objects, they are so fast and agile, so occult and fantastic, that one considers them more of an illusion than anything else. They are at least as real as our own spacecraft. ...

These saucers - let’s call them UFOS - are **visible evidence** that an even HIGHER AUTHORITY stands and keeps vigil over the people on Earth. We are certainly not completely at the mercy of hell. ...

From the protocol [\[ Too hot to handle \(a hot potato\)](#) - page 3 and 4
