

UNIVERSE | Radio signals from space?

(From a report by H. V. Speer – leader of the MFK Berlin)

The most powerful nations on this Earth do not shy away from spending money to develop spaceships man on Earth can travel to other stars with. Many scientists of great renown are convinced these days that there are many planets throughout the universe that harbour *intelligent* life. A lot of attempts have already been made to make contact with human beings or highly evolved beings. Radio signals were received that indicate that we could be dealing with extraterrestrial signals or messages.

Scientific groups do believe that it will be possible one day to make contact with people from other planets and higher standards of living. Enormous amounts of money are already uninterruptedly being spent on these attempts. ...

Question:

With the help of radio telescopes, scientists scan the heavens in search of radio signals from extraterrestrial life forms. Why do the SANTINER not furnish these radio signals en *masse* and *worldwide*, so that even ham radio operators could receive these signals? The speculation of whether intelligent life exists out there in the universe would be dealt with once and for all. One could no longer hide the facts.

Answer:

It would be as if you would switch your radio on to hear a native in the jungle beat his drums. You would not be able to make a connection. Making contact is difficult, because the technical means *do not suffice*.

Objection:

This is incomprehensible to me. Any fool on Earth can build a radio transmitter. ...

Answer:

The transmitter does exist and it is called *telepathy*.

Objection:

But *not* everybody can receive telepathic messages, at least not consciously.

Answer:

But this is the *first step* in regard to *opening* one's soul and in regards to the new consciousness of the age.

Question:

This is apparently *not* to be accomplished with the help of technology?

Answer:

This would be much too simple.

From the protocol [[Extraterrestrial life](#)] – page 5 - 6

They look in the wrong places, because they only look with their minds. It would be important to look with their heart and to see with their heart. If the heart, the mind and the spirit are *in alignment*, doors will open. ...

Question:

Does scanning the universe for probable radio signals from extraterrestrial civilisations make sense?

TAI SHIIN:

No. You do not have the technology at this point in time to achieve this.

From the protocol [[SANTINER-Contact 1999](#)] - page 6

(From a report by H. V. Speer - **leader of the MFK Berlin**)

We do however not have to rely on the success of such technical connections. Far superior extraterrestrial people, namely the SANTINER, have already successfully established a mutual communications channel with us. Their communications are *spiritual*, that is to say, of a *psychic nature* and this includes telepathy. ...

I am certainly not trying to insinuate that we can do without technical channels of communication with extraterrestrials. It would *certainly also* be very much appreciated. But it does seem *more logical* to allow others *to help* us with this. Such HELP however can only come our way, if we unconditionally accept the FRIENDSHIP offered by the SANTINER. This FRIENDSHIP however requires that we *consequently cease* all acts of animosity here on Earth. But due to ill will, everything fails in this regard and we have to continue to rely on psychic communications for the foreseeable future. ...

From the protocol [[Not from this Earth - Part 4](#)] - page 3

Your technicians listen for signs of extraterrestrial life with gigantic instruments. But this does not require a gigantic instrument. ...

Parapsychology gradually enjoys a certain acceptance; but it is about time that you explore in this direction. Parapsychology is one of the most important fields within space travel. Your aerospace industry has not yet comprehended this. One racks one's brains over intangible observations and phenomena, but one is not yet prepared to consider that within the *extraterrestrial* region there might also be *extraterrestrial* opportunities.

- *The more terrestrial research into space deals with research into parapsychology, respectively spiritualism, the sooner one will be able to explore and comprehend the universe.*
